**Harvey Michael (Date of Birth: Jun 22, 1985)**

**Chief Complaint: stricture, slow stream, post op internal urethrotomy**

**Apr 28, 2015**

**HISTORY / PHYSICAL**

**PQRS DOCUMENTATION:**

Date Current Medications Verified 04/28/2015.

**PRESENT ILLNESS:** The patient is a 29 year old male who presents for an established patient visit.

**Primary Provider:** Dr. Timothy Ewing

The patient returns because of **3 month uroflow/pvr.**

**SLOW STREAM:** He has a slow urinary stream which has been present the last **several months**. He was treated with **DVIU 4/5/11 and previously ~age 17**. He has not been in urinary retention since the last visit. There is no abdominal pain. There is no back pain. No dysuria noted. He has no frequency. No hematuria is present. There is no urinary hesitancy. There is no straining with urination. Patient states his **urinary stream varies in size and strength**. There is no stress incontinence. There is no urgency. There is no urgency incontinence. **He has done well with the CIC BID and feels he has a good stream. He occasionally meets resistance and he is doing CIC BID. He was unable to comply with BID cic during his UTI he also had fever and diarrhea again wth the UTI. He is now doing CIC BID and in doing OK, but is meeting some resistance.** The symptoms are **the same**.

**URETHRA:** He has symptoms of a urethral stricture which have been present **approximately a year. The stricture has been treated previously** with internal urethrotomy. The symptoms are better. No dysuria noted. Patient has been emptying well. He has no frequency. No hematuria is present. There is no urinary hesitancy. He has no nocturia. He has no history of urinary retention. There is no straining with urination. There is a normal urinary stream. There is no urgency. There is no urgency incontinence. **Saw his original Urologist in new Hampshire in Dec. had a cysto. He has a photo which shows a dense apparent short stricture. He was incised 10/29/14 adn is flowing well.**

**The patient currently is using (lofric) (18FR) (MALE) (straight)**

**(2) times a day; (60) catheters are used in a 30 day period.**

**The patient needs (12) refills of monthly catheter supplies.**

**This patient's use for catheters is (INDEFINITE).**

**See PROBLEM and CURRENT IMPRESSION lists for current diagnosis to support the need for catheters.**

**POSTOP:** 10/29/2014 was the date of his internal urethrotomy. Catheter is out and patient is voiding well. There is no back pain.

**ACTIVE MEDICATIONS:**

**Practice: Louisiana Urology, 8080 Bluebonnet Blvd #3000, Baton Rouge, LA, 70810**

**Harvey Michael (Date of Birth: Jun 22, 1985)**

**Chief Complaint: stricture, slow stream, post op internal urethrotomy**

**Dec 16, 2014**

**HISTORY / PHYSICAL**

**PQRS DOCUMENTATION:**

Date Current Medications Verified 12/16/2014. List of current medications (includes prescription, over-the-counter, herbals, vitamin/mineral/dietary [nutritional] supplements) documented by the provider, including drug name, dosage, frequency and route.

**PRESENT ILLNESS:** The patient is a 29 year old male who presents today for a post-operative evaluation.

**Referring Provider:** Dr. William Kubricht, III

**Primary Provider:** Dr. Timothy Ewing

The patient returns because of **Post op 6 weeks office visit, uroflow, pvr. cic w/ 18 fr catheter bid, strong force on urination.** The symptoms are Unchanged since the previous visit. **NO difficulty with foley.**

**SLOW STREAM:** He has a slow urinary stream which has been present the last **several months.** He was treated with **DVIU 4/5/11 and previously ~age 17.** He has not been in urinary retention since the last visit. There is no abdominal pain. There is no back pain. No dysuria noted. He has no frequency. No hematuria is present. There is no urinary hesitancy. There is no straining with urination. Patient states his **urinary stream varies in size and strength.** There is no stress incontinence. There is no urgency. There is no urgency incontinence. **He has done well with the CIC BID and feels he has a good stream. He occasionally meets resistance** The symptoms are **the same.**

**URETHRA:** He has symptoms of a urethral stricture which have been present **approximately a year. The stricture has been treated previously** with internal urethrotomy. The symptoms are better. No dysuria noted. Patient has been emptying well. He has no frequency. No hematuria is present. There is no urinary hesitancy. He has no nocturia. He has no history of urinary retention. There is no straining with urination. There is a normal urinary stream. There is no urgency. There is no urgency incontinence. **Saw his original Urologist in new Hampshire in Dec. had a cysto. He has a photo which shows a dense apparent short stricture. He was incised 10/29/14 adn is flowing well.**

**The patient currently is using (lofric) (18FR) (MALE) (straight)**

**(2) times a day; (60) catheters are used in a 30 day period.**

**The patient needs (12) refills of monthly catheter supplies.**

**This patient's use for catheters is (INDEFINITE/SHORT TERM).**

**See PROBLEM and CURRENT IMPRESSION lists for current diagnosis to support the need for catheters.**

**POSTOP:** 10/29/2014 was the date of his internal urethrotomy. Catheter is out and patient is voiding well. There is no back pain.

**ACTIVE MEDICATIONS:**

**PRESENT ILLNESS:** The patient is a 29 year old male who presents for an established patient visit.

#### **3 months followup ,pvr**

The patient returns because of **1 month routine follow up, URQ/PVR**. The symptoms are Unchanged since the previous visit.

**SLOW STREAM:** He has a slow urinary stream which has been present the last **several months**. He was treated with **DVIU 4/5/11 and previously ~age 17**. He has not been in urinary retention since the last visit. There is no abdominal pain. There is no back pain. No dysuria noted. He has no frequency. No hematuria is present. There is no urinary hesitancy. There is no straining with urination. Patient states his **urinary stream varies in size and strength**. There is no stress incontinence. There is no urgency. There is no urgency incontinence. **He reports that he has noted some slowing of his stream since he had his RUG. He did not pick up his cipro at that time, ubt did start it last week. He feels that his flow is better since starting it.** The symptoms are **the same**.

**URETHRA:** He has symptoms of a urethral stricture which have been present **approximately a year. The stricture has been treated previously** with internal urethrotomy. The symptoms are better. No dysuria noted. Patient has been emptying well. He has no frequency. No hematuria is present. There is no urinary hesitancy. He has no nocturia. He has no history of urinary retention. There is no straining with urination. There is a normal urinary stream. There is no urgency. There is no urgency incontinence. **Saw his original Urologist in new Hampshire in Dec. had a cysto. He has a photo which shows a dense apparent short stricture.**

### DISCUSSIONS:

#### Urethral Stricture

I reviewed with the patient the location of the urethral narrowing and the implications for obstruction of urine flow. We reviewed anatomy and the pathophysiology of stricture disease. We reviewed the options for evaluation and treatment including, but not limited to, cystoscopy and retrograde urethrogram. Treatment recommendations are based on the findings at evaluation, they include but are not limited to, observation, self dilation, endoscopic incision / dilation or open surgical repair. The patient expressed understanding and agreed to proceed. I reviewed his options at length. He would like an estimate as to how long his current flow / stricture would be stable. I restated that this is not a predictable item. He would like to be as little as possible for now and his next step would be dviu with CIC

**Heart:** Normal rate No evidence of extremity swelling. No varicosities.

**ABDOMEN:** No masses are palpated. There is no tenderness. Liver and spleen appear to be normal. No herniae noted.

## GENITOURINARY:

**Bladder:** The bladder appears to be empty. No masses are palpated. There is no tenderness.

**Penis:** The penis appears to be essentially normal and is circumcised. No external lesions or masses are present. There are no internal masses or lesions noted. There is no tenderness.

**Urethral Meatus:** The meatus is normal in size and location.

**Scrotum:** No erythema or edema of scrotal skin. No evidence of scrotal cysts or rash. No inguinal hernia noted.

**Testicles:** Both testicles are normal to palpation. No masses or tenderness noted. Size normal.

**Epididymides/Vas:** Both epididymes and vas deferens are normal to palpation. No masses or tenderness noted.

**Anus/Perineum:** The anus is inspected. No definite perineal masses are noted.

**Sphincter:** The sphincter has good tone. Minimal hemorrhoids are noted. No rectal mass is noted.

**Prostate:** Normal size, **30-50 gm**

## SKIN:

warm and dry

**MUSCULOSKELETAL:** Gait appears normal.

**NEUROLOGICAL:** Patient appears to be well oriented to time, place, and person.

## ASSESSMENT AND PLAN

### TEST RESULTS:

**RUG- tight, short bulbar stricture.**

reviewed this image again with the patient

All radiological images were reviewed by provider.

### Results received as of last encounter (04/04/12) through this encounter (04/30/12)

**None**

### Historical results

**None**

### Vital Signs:

04/30/2012: BP Systolic: 142, BP Diastolic: 81, Pulse: 75, Weight (lbs): 170, Height (inches): 71, BMI: 23.708

Uroflow w PVR (51741) (51798):

04/30/2012: Flowrate (ml): 28, Volume voided (ml): 582, PVR (ml): 10

Residual Urine (PVR) (51798):

04/30/2012: PVR: 10, Catherized: No

**Practice: Louisiana Urology, 8080 Bluebonnet Blvd #3000, Baton Rouge, LA, 70810**

**Harvey Michael (Date of Birth: Jun 22, 1985)**

**Chief Complaint: stricture, slow stream**

**Apr 04, 2012**

**HISTORY / PHYSICAL**

**PQRS DOCUMENTATION:**

List of current medications (includes prescription, over-the-counter, herbals, vitamin/mineral/dietary [nutritional] supplements) documented by the provider, including drug name, dosage, frequency and route. Date Current Medications Verified 04/04/2012. Patient encounter documented using CCHIT certified EMR.

**PRESENT ILLNESS:** The patient is a 26 Years old male who presents today for a new patient visit.

**Referring Provider:** Dr. William Kubricht, III

The patient is here today because of **referral from Dr Kubricht for urethral stricture.**

**SLOW STREAM:** He has a slow urinary stream which has been present the last **several months**. He was treated with **DVIU 4/5/11 and previously ~age 17**. He has not been in urinary retention since the last visit. There is no abdominal pain. There is no back pain. No dysuria noted. He has no frequency. No hematuria is present. There is no urinary hesitancy. There is no straining with urination. Patient states his **urinary stream varies in size and strength**. There is no stress incontinence. There is no urgency. There is no urgency incontinence. pt still reporting that he is unsure if he is voiding as well as he was immediately after DVIU. no changes since last visit. pt states that stream is not as powerful as before, but has not slowed down to any significant degree. doing well otherwise. no new medical complaints.

**He will be finishing semester in May and would to have repair prior to Leaving country in June.**

**I reviewed his symptoms. He reports that if he voided like this for the rest of his life he would be happy, he is concerned regarding the the necessity for annual dilations and sudden dribbling of urine.** The symptoms are **the same**.

**URETHRA:** He has symptoms of a urethral stricture which have been present **approximately a year. The stricture has been treated previously** with internal urethrotomy. The symptoms are better. No dysuria noted. Patient has been emptying well. He has no frequency. No hematuria is present. There is no urinary hesitancy. He has no nocturia. He has no history of urinary retention. There is no straining with urination. There is a normal urinary stream. There is no urgency. There is no urgency incontinence. **when returned last fall pt developed pain in urethra. no discharge. no hematuria. no ejaculatory dysfunction. - no changes since last visit. no new complaints.**

**ACTIVE MEDICATIONS:**

none

**ALLERGIES:**

 CHRONIC PROSTATITIS (601.1)

#### CURRENT IMPRESSION:

UNS URETHRAL STRICTURE (598.9)

#### HEALTH MAINTENANCE:

none

#### DISCUSSIONS:

##### **Urethral Stricture**

I reviewed with the patient the location of the urethral narrowing and the implications for obstruction of urine flow. We reviewed anatomy and the pathophysiology of stricture disease. We reviewed the options for evaluation and treatment including, but not limited to, cystoscopy and retrograde urethrogram. Treatment recommendations are based on the findings at evaluation, they include but are not limited to, observation, self dilation, endoscopic incision / dilation or open surgical repair. The patient expressed understanding and agreed to proceed.

We will repeat UroQ/PVR in late April. WE will make a treatment decision based on that result.

We discussed the risk of obstruction prior any intervention and the potential delay for any formal repair with repeat DVIU. We also reviewed the importance of post DVIU CIC should he choose this option.

#### NEW PLAN OF TREATMENT:

##### **Ordered**

**Schedule - -Return Office Visit with services - Ordered 04/04/12**

Return Office Visit: 1 month

Services at next visit:

Uroflow/PVR

**Urine - Urine C and S - Ordered 04/03/12**

##### **Completed by Provider**

**None**

**Completed by Provider**

**None**

**SUMMARY OF FINDINGS:** Options include end-end urethroplasty versus repeat DVIU/dilation. Pt would be best serve with formal urethroplasty due to age, prompt recurrence and good state of health.

Pt defers CIC at this time and will notify us if flow diminishes.

RTC to Dr Smither for consultation for urethroplasty when school out this May.

RUG preformed today.

**Discontinued Medications:**

Cipro 500 mg oral tablet, #1 once a day, dispensed: 1

**PRESCRIPTION THIS VISIT:**

**Date medications last reviewed with patient: 03/21/12**

**Patient has no active medications on file**

(The purpose of any medications prescribed on this visit, mode of administration, and side effects were discussed with the patient.)

Patient: Harvey, Michael 06/22/1985 M	Encounters Summary and Details

IMPOTENCE ORGANIC ORIGIN (607.84)

CHRONIC PROSTATITIS (601.1)

**CURRENT IMPRESSION:**

UNS URETHRAL STRICTURE (598.9)

URINARY OBSTRUCTION UNSPEC (599.60)

**HEALTH MAINTENANCE:**

none

**NEW PLAN OF TREATMENT:**

**Ordered**

**Schedule - -Return Office Visit with services** - Ordered 01/20/12

Return Office Visit: 2 months

Services at next visit:

~ Other Service: retrogradeurethrogram and flow/pvr.

**Completed by Provider**

**None**

**PROCEDURES IN-OFFICE:** Consent for cystoscopy signed.

**Cystoscopy:**

**SURGEON:** William S. Kubricht, M.D.

**ANESTHESIA:** Under sterile conditions, Xylocaine jelly was inserted into the urethra for local anesthesia.

**FINDINGS AND PROCEDURE:**

The history, physical findings, current medications, and indications were reviewed prior to the procedure. I discussed the procedure with the patient, including possible complications.

Using a sterile technique and prep, the patient was draped in the dorsal lithotomy position, video cystoscopy was performed using the flexible cystoscope and sterile water.

**Urethra:** There is a stricture of the bulbous urethra. short dense. able to pass cystoscope across but certain narrow. Only 10 months since DVIU

**Prostate:** Prostatic fossa is not obstructed.

**Bladder:** Bladder shows no abnormalities. No trabeculation. No foreign bodies. No evidence of tumor or stones. Normal bladder expansion.

**Ureter:** Clear efflux noted both orifices. Orifices normal configuration and location.

OPERATIVE/PROCEDURE REPORT

---

PATIENT NAME:	HARVEY, MICHAEL	MR NUMBER:	106152	DOB:	06/22/1985
ADMIT DATE:	10/29/2014	ACCT NUMBER:	343476		

---

**DATE OF PROCEDURE:** 10/29/2014

**PREOPERATIVE DIAGNOSIS:** Urethral stricture.

**POSTOPERATIVE DIAGNOSIS:** Urethral stricture.

**OPERATIVE PROCEDURE:** Cystoscopy Quanta laser direct visual internal urethrotomy.

**SURGEON:** Anna Smith, MD

**PROCEDURE IN DETAIL:** The patient was brought into the operating arena, and after satisfactory anesthesia was positioned in the lithotomy position and prepped and draped in the usual fashion. A pause was made to identify the patient, the planned operative procedure, the perioperative administration of antibiotics, as well as the presence of all pertinent personnel and equipment. Once this was accomplished we proceeded as planned.

A 22 French cystoscope was advanced into the urethra. The stricture was identified in the distal bulb. It was a short stricture that would not accommodate the scope. The 22 scope was removed and the 22 French Quanta laser scope was introduced with continuous flow. An 800 micron fiber at 40 watts was utilized for a total of 1400 joules to incise the stricture 6 o'clock and 12 o'clock. It opened quite easily to accommodate the scope. The scope was then advanced into the bladder and the bladder was surveyed and free of erythematous or papillary lesions. He does have a relatively high bladder neck. Once hemostasis was confirmed, the scope was withdrawn and a 20 French silicone catheter was advanced into the urethra and into the bladder without difficulty. The balloon was inflated. The catheter was left to gravity drainage. The patient was returned to the supine position. He tolerated the procedure without difficulty.

**Informed Consent Information**

It is important that you fully understand information about your upcoming procedure, including the risks, benefits and alternatives associated with it. The purpose of this document is to provide you with this information, as a supplement to discussion with your physician.

Please read this document carefully, and ask your physician any questions you may have before you sign this document.

**Patient Name:** Michael Harvey    **Date of Birth:** 06/22/1985

**Reason for the procedure:**

Stricture (narrowing) or scarring of urethra.

**The procedure:**

Cystoscopy with Visual Internal Urethrotomy of Urethral Stricture

This procedure involves a cystoscopy (insertion of a thin, tubular, lighted instrument for viewing and for passing small surgical tools into the urethra and bladder) and urethrotomy (inserting tools in the scope to open narrowed areas of the urethra).

For this procedure, the patient lies face up and receives either general anesthesia (unconsciousness caused by drugs) or spinal anesthesia (loss of feeling, waist down, caused by drugs injected into the spinal fluid). The patient has both legs raised and held in stirrups. The lower abdomen and genitalia are washed with an antiseptic liquid.

The doctor then passes either a cystoscope or resectoscope (a tubular viewing scope with a cutting tool to remove tissue) through the urethra and into the prostatic urethra until a strictured or narrowed area is found. The doctor inserts a resecting (cutting) tool through a channel in the scope or a laser is used to open or widen the narrowed area. The entire lining of the bladder and urethra is inspected until all strictures are opened. During the procedure, the constant flow of a water solution washes away bleeding to allow clear viewing.

A catheter (a long, thin tube) is inserted through the urethra and bladder to drain urine into a drainage bag. This tube will stay in from hours to a few days, depending on the extent of the surgery and expected healing times.

**Procedure Anatomical Location:**

---

Page 1 of 3

- \* Suprapubic catheter. This allows the urine to drain through the abdomen.
- \* Reconstruction of the urethra (urethroplasty).
- \* Surgery for other forms of urinary diversion.
- \* You may choose not to have this procedure.

**What to expect if you decide not to have this procedure:**

If you choose not to have this procedure, your urine symptoms may continue. They may get worse. Retention of urine may lead to infection, bladder damage, and kidney damage.

**Additional Information:**

Page 2 of 3

Name: Michael Harvey

DOB: 06/22/1985

I discussed the above information with the patient. The patient had an opportunity to have all questions answered and was given a copy of this information sheet.

**Practice: Louisiana Urology, 8080 Bluebonnet Blvd #3000, Baton Rouge, LA, 70810**

**Harvey, Michael (Date of Birth: Jun 22, 1985)**

**Chief Complaint: stricture, slow stream, preop major surgery**

**Oct 27, 2014**

**HISTORY / PHYSICAL**

**PQRS DOCUMENTATION:**

Date Current Medications Verified 10/27/2014. List of current medications (includes prescription, over-the-counter, herbals, vitamin/mineral/dietary [nutritional] supplements) documented by the provider, including drug name, dosage, frequency and route.

**PRESENT ILLNESS:** This is a 29 year old male. He is an established patient who presents today for pre operative evaluation prior to:

**CYSTOSVCOPY, VISUAL INTERNAL URETHROTOMY URETHRAL STRICTURE**

I explained the procedure to the patient and family members present. I explained the possibility of infection and swelling after surgery. I did emphasize that there would be some postoperative pain but this would be treated with various medications. All present expressed an understanding of the procedure with the possible complications and wish to proceed.

**Referring Provider:** Dr. William Kubricht, III

**3 months followup ,pvr**

The patient returns because of **Pre op**. The symptoms are Unchanged since the previous visit.

**SLOW STREAM:** He has a slow urinary stream which has been present the last **several months**. He was treated with **DVIU 4/5/11 and previously ~age 17**. He has not been in urinary retention since the last visit. There is no abdominal pain. There is no back pain. No dysuria noted. He has no frequency. No hematuria is present. There is no urinary hesitancy. There is no straining with urination. Patient states his **urinary stream varies in size and strength**. There is no stress incontinence. There is no urgency. There is no urgency incontinence. **He reports that he has noted some slowing of his stream since he had his RUG. He did not pick up his cipro at that time, ubt did start it last week. He feels that his flow is better since starting it.** The symptoms are **the same**.

**URETHRA:** He has symptoms of a urethral stricture which have been present **approximately a year**. **The stricture has been treated previously** with internal urethrotomy. The symptoms are better. No dysuria noted. Patient has been emptying well. He has no frequency. No hematuria is present. There is no urinary hesitancy. He has no nocturia. He has no history of urinary retention. There is no straining with urination. There is a normal urinary stream. There is no urgency. There is no urgency incontinence. **Saw his original Urologist in new Hampshire in Dec. had a cysto. He has a photo which shows a dense apparent short stricture.**

**ACTIVE MEDICATIONS:**

Date medications last reviewed with patient: 10/27/14  
ciprofloxacin hydrochloride 500 mg oral tablet, #1 twice a day, dispensed: 20

**ALLERGIES:**

Date patient last asked about allergies: 10/27/14

Medication Allergies: NKDA

Environmental Allergies: None

PFSH: Updated - 10/27/2014

**PAST MEDICAL HISTORY:** USD (stable)

**PAST SURGICAL HISTORY:**

Non-Urological: USD repair in New Hampshire., DVIU - 4/5/11 (Dr. Kubricht)

**FAMILY HISTORY:**

Stroke-

Other - lung disease

**SOCIAL HISTORY:**

Occupation:

Other - graduate student - ornithology

Daily Alcohol Consumption:

Does not smoke or use any tobacco products.

Other - camping in South America (Peru, Bolivia). Infrequent bathing in rivers. uuk

**REVIEW OF SYSTEMS:** Updated - 10/27/2014

**Constitutional:** No fever, chills, or weight loss.

**Allergic/Immunologic:** Any drug allergies are listed under the Allergy category.

**Genitourinary:** See symptoms listed in present illness.

Vital Signs:

10/27/2014: BP Systolic: 133, BP Diastolic: 74, Pulse: 64, Weight (lbs): 175 lbs, Height (inches): 71", BMI: 24.405

**PHYSICAL EXAMINATION:****CONSTITUTIONAL:**

**General Appearance:** Well developed, well nourished male in no acute distress.

**Eyes:** Sclera normal, pupils reactive

**ENMT:** Normal pinna; normal sense of hearing; normal nares and mucosa; midline nasal septum; normal lips, Mucus membranes moist: no focal facial asymmetry.

**RESPIRATORY** Normal respiratory effort. Symmetric excursions

**CARDIOVASCULAR:**

Heart: Normal rate No evidence of extremity swelling. No varicosities.

ABDOMEN: No masses are palpated. There is no tenderness. Liver and spleen appear to be normal. No herniae noted.

**SKIN:**

warm and dry abrasions to the palms of both hands (fell from his bike yesterday)

MUSCULOSKELETAL: Gait appears normal.

NEUROLOGICAL: Patient appears to be well oriented to time, place, and person.

**ASSESSMENT AND PLAN****TEST RESULTS:**

RUG- tight, short bulbar stricture.

reviewed this image again with the patient

Results received as of last encounter (09/19/14) through this encounter (10/27/14)

None

**Historical results**

None

**Vital Signs:**

10/27/2014: BP Systolic: 133, BP Diastolic: 74, Pulse: 64, Weight (lbs): 175 lbs, Height (inches): 71", BMI: 24.405

Residual Urine (PVR) (51798):

10/27/2014: PVR: 59, Reason for procedure: Other, Catherized: No

**PROBLEM LIST:**

URINARY OBSTRUCTION UNSPEC (ICD9: 599.60)

**CURRENT IMPRESSION:**

UNS URETHRAL STRicture (ICD9: 598.9)

INCOMPLETE BLADDER EMPTYING (ICD9: 788.21)

IMPOTENCE ORGANIC ORIGIN (ICD9: 607.84)

CHRONIC PROSTATITIS (ICD9: 601.1)

**HEALTH MAINTENANCE:**

none

**DISCUSSIONS: Major surgical discussion**

I reviewed with the patient and those members of the family present, the planned procedure as outlined in the plan below. We reviewed the options, risks and benefits of the operation. We also reviewed perioperative and post operative expectation. I

Harvey, Michael (DOB: Jun 22, 1985)

Oct 27, 2014

page 3

answered questions and they agreed to proceed with the preoperative evaluation and the planned procedure. I discussed the particulars of my surgical and post operative expectations as well of options, risks and benefits. WE discussded catheter duratioan and the need for post operative CIC  
Pre op clearance labs, studies and H&P reviewed. Consent reviewed with the patient, questions answered. Consent signed.

**NEW PLAN OF TREATMENT:****Ordered****Schedule - -Return Office Visit - Ordered 10/27/14**

Return Office Visit: post op

**Urine - Urine Culture (Office) - Ordered 10/27/14****Completed by Provider****None**

**SUMMARY OF FINDINGS:** Options include end-end urethroplasty versus repeat DVIU/dilation. Pt would be best serve with formal urethroplasty due to age, prompt recurrence and good state of health.

Pt defers CIC at this time and will notify us if flow diminishes.

RTC to Dr Smither for consultation for urethroplasty when school out this May.  
RUG preformed today.

**Discontinued Medications:**

none

**PRESCRIPTION THIS VISIT:****Date medications last reviewed with patient: 10/27/14**

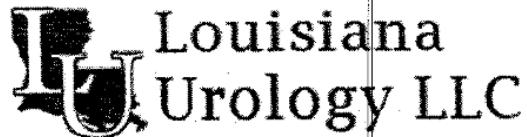

(The purpose of any medications prescribed on this visit, mode of administration, and side effects were discussed with the patient.)

## CONSENT FOR DIAGNOSTIC X-RAY PROCEDURE

I hereby authorize Dr. Smithen and/or assistants as may be selected by said physician to treat the following condition(s). Diagnosis Stricture.

The procedures planned for the diagnosis of my condition(s) have been explained to me by my physician and are listed below

- X-RAY OF KIDNEY BY INJECTION OF DYE THROUGH A CYSTOSCOPE PLACED INTO THE BLADDER  
 CYSTOURETHROGRAM (BLADDER X-RAY) Urethrogram  
 NEPHROSTOGRAHM

Possible risks associated with this procedure(s):

NEED FOR ADDITIONAL DIAGNOSTIC PROCEDURES

INFECTION OF KIDNEY OR KIDNEY PAIN

BLADDER INFECTION

BLOOD IN URINE (CLOTS) WITH KIDNEY PAIN (RARELY SIGNIFICANT)

ALTERNATIVE THERAPY: OTHER FORMS OF X-RAY OR SCAN OR ULTRASOUND

I CERTIFY THAT THIS FORM HAS BEEN EXPLAINED TO ME AND THAT I HAVE READ IT, OR HAVE HAD IT READ TO ME AND THAT I UNDERSTAND ITS CONTENTS.

IS THERE A CHANCE YOUR PREGNANT?  YES  NO LAST MENSTRUAL CYCLE \_\_\_\_\_

Patient or Guardian Signature M.H. Date 7-15-14 Time \_\_\_\_\_

Witness Lee A. Shroyer

State law guarantees that you have both the *right* and *obligation* to make decisions concerning your health care. Your physician can provide you with the necessary information and advice but as a member of the health care team, you must enter into the decision making process. This form has been designed to acknowledge your acceptance of treatment recommended by your physician.

The information that follows is the text from a standardized Surgical Consent form. It is used for the most minor of procedures and the most complicated and serious ones. It is not meant to frighten you but rather to inform you that ALL procedures carry some risks. Many operations, for instance, have only the remotest chance of needing blood transfusions, but yet blood transfusions are mentioned. This form hopefully will allow you to better understand your upcoming operation. If you don't understand something - ASK.

I recognize that, during the course of the operation, post-operative care, medical treatment, anesthesia or other procedures, unforeseen conditions may necessitate additional or different procedures than those set forth. I therefore authorize my above physician, and their assistants or designees, to perform such surgical or other procedures as are in the exercise of their professional judgement necessary and desirable. The authority granted under this paragraph shall extend to the treatment of all conditions that require treatment and are not known to my physician at the time the medical or surgical procedure is commenced.

I have been informed that there are significant risks such as severe loss of blood, infection and cardiac arrest that can lead to death or permanent or partial disability, which may be attendant to the performance of any procedure.

I realize that the list of risks and complications on this form may not include all possible or known risks of the intended surgery but is a list of the more common or severe ones. I realize that new risks may exist or may be found in the future that are not mentioned on this consent form.

I acknowledge that no warranty or guarantee has been made to me as to the results of my procedure(s).

I understand that any aspect of this consent form that I do not understand can be explained to me in further detail by asking my physician(s) or their associates.

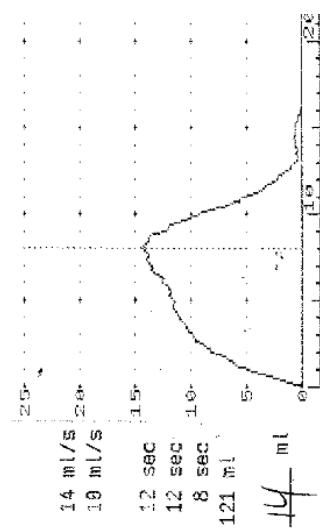

I certify that my physician has informed me of the nature and character of the proposed treatment, of the anticipated results of the proposed treatment, of the possible alternative forms of treatment; and the recognized serious possible risks, complications, and the anticipated benefits involved in the proposed treatment and the alternative forms of treatment, including non-treatment.

Patient or Guardian Initials MH

The medical procedure or surgery stated on this form, including the possible risks, complications, alternative treatments (including non-treatment) and anticipated results, was explained by me to the patient or his/her representative before the patient or his/her representatives consented.

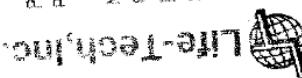

Physician's Signature DR. SMITHEN

### NOTICE REGARDING CHARGE FOR MISSED APPOINTMENTS

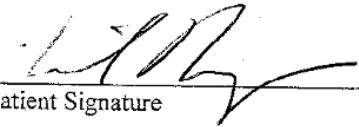

If you are unable to keep your scheduled appointment, please notify our office at least 24 hours in advance. **Failure to notify the office at least 24 hours prior to the time of your appointment will result in a \$25.00 charge, which will be added to your account.**

As a courtesy, you will receive a telephone call from our appointment reminder system at the phone number that you provide as your "home telephone" number. We cannot guarantee that this reminder will be completed at least 24 hours prior to your appointment, therefore we recommend that you keep a record of your appointment time and, should you need to cancel or reschedule, contact us as soon as possible.

Your compliance with this policy will allow us to coordinate our schedule more efficiently and will allow us to schedule patients who may need to be seen urgently.

Thank you for your cooperation

What bothers you the most about the way you pass urine?

Circle the number in the column which best describes your symptoms OVER THE LAST MONTH	Not at all	Less than 1 time in 5	Less than half the time	About half the time	More than half the time	Almost always	
1. How often have you had a sensation of not emptying your bladder completely after you finished urinating?	0	1	2	3	4	5	
2. How often have you found you stopped and started again several times when you urinated?	0	1	2	3	4	5	
3. How often have you had a weak urinary stream?	0	1	2	3	4	5	
4. How often have you had to push or strain to begin urination?	0	1	2	3	4	5	
5. How often have you had to urinate again less than 2 hours after you finished urinating?	0	1	2	3	4	5	
6. How often have you found it difficult to postpone urination?	0	1	2	3	4	5	
	None	1 time	2 times	3 times	4 times	5 times	
7. How many times do you most typically get up to urinate from the time you went to bed at night until the time you get up in the morning?	0	1	2	3	4	5	
	Delighted	Pleased	Mostly satisfied	Mixed feelings	Mostly dissatisfied	Unhappy	Terrible
If you were to spend the rest of your life with your urinary condition just the way it is now, how would you feel about that?	0	1	2	3	4	5	6

If you do urinate after you go to bed at night, are you (check one):

Awakened by the urge to urinate       Urinate because you're up already

Do you have a normal sensation of urinating?

Yes

No

Is the amount of urine you usually pass (circle appropriate answers):

During the day:

Large

Small

At night:

Large

Small

Average  
 Average

Are your urinary symptoms bothersome enough that you would want (check one):

To take medication

Have surgery

Not that bothersome

Have you taken medication for your prostate?

No

Yes (which and when)

Did it help you pass urine?

Have you ever experienced episodes when you were unable to pass urine at all?

Yes

No

Please explain:

Do you wet yourself (urinary incontinence)? If yes, for how long?	Yes	No	(if no, skip to next section)					
Is it getting worse?	Years							
Did it start after an injury or surgery (circle):	No	Yes	Yes (specify) _____					
How often does leakage happen (circle appropriate answer)?								
Several times a day	Once a day	A few times a week	Once a week					
Once a month	Rarely							
Are you aware of when the leakage occurs (circle appropriate answer)? N/A								
Always	Usually	Sometimes	Never (just realize that you're wet)					
Does the leakage come in (circle appropriate answer)? N/A								
Few drops at a time	Spurts	Gushes	Continuous dripping					
Is the leakage worse with activities such as (circle the appropriate answers)? N/A								
Coughing	Sneezing	Running	Heavy lifting					
Walking			Not related to activity					
Is the leakage associated with a sudden strong urge to urinate so that you can't get to the toilet in time? N/A								
Always	Usually	Sometimes	Never					
What seems to trigger the sudden urgency and leakage? N/A								
-sight, sound, feel of running water	Yes	No						
-changing your position (from lying to sitting or sitting to standing)	Yes	No						
-putting the key in the door when you return home	Yes	No						
-other: _____								
Do you lose urine without any warning (without activity or any feeling of urgency to urinate)? Yes No								
Do you wet yourself while asleep? Yes No								
Does the urine leakage interfere with sexual activity? N/A Yes No								
Do you wear protection for the wetting? N/A Yes No								
If yes, what kind of protection, how wet does it get, and how many times would you change it in a typical day?								
Kind of protection (pads, diaper, penile clamp, etc.):								
How wet (circle)?	Soaked through	Moderately wet	Damp	A few drops				
Number of pads/diapers changed per day (circle one):	0-1	1-2	2-3	3-4	4-5	5-6	6-7	more
Number of pads/diapers changed at night (circle one):	0-1	1-2	2-3	3-4	4-5	5-6	6-7	more
What medication have you tried for the wetting and when? N/A								
Did the medication help (circle)? A lot A little Not at all								
Have you had any operations to correct the leakage? N/A Yes No								
What was done and when? _____								
Did it help? _____								
Has urine leakage affected your (circle):								
	not at all 0	slightly 1	mod 2	greatly 3				
-ability do household chores	0	1	2	3				
-physical activities/exercise	0	1	2	3				
-entertainment activities (movies, concerts)	0	1	2	3				
-ability to travel more than 30 minutes from home	0	1	2	3				
-participation in social activities outside your home	0	1	2	3				
-emotional health (depression, anxiety, etc)	0	1	2	3				
-feeling frustrated	0	1	2	3				

Do you experience pain in relation to your bladder?  
If yes, is it (check appropriate ones):

 Yes No

- Burning in penis or lower abdomen with urination  
 Pain in lower abdomen when bladder is full  
 Pain in the rectum or testicles

Does the pain/burning get better once you finish urinating?

 Yes No

#### INFECTIONS:

How often do you get urinary infections (circle appropriate):

Never       1-2/year      3-4/year      5-6/year      More      (if never, skip to next section)

What symptoms do you get with a urine infection (circle appropriate ones):

Increased frequency of urination       Urgency Burning      Wetting      Cloudy Urine      Blood

Do you usually get a urine culture done?      Yes

 No

Are the cultures usually positive?

Yes      No

Do your symptoms usually improve with antibiotics (circle appropriate):

Always      Sometimes      Not Really      Which antibiotics? \_\_\_\_\_

Have you ever taken an antibiotic to prevent urine infections?

No      Yes (which ones and for how long) \_\_\_\_\_

With a urine infection do you ever experience (circle appropriate):

Back/side pain      Chills      Sweats      Fever (how high) \_\_\_\_\_

#### SEXUAL FUNCTION:

Are you satisfied with your sexual function?

 Yes No

(If yes, skip to next section)

If not, are you interested in treatment?

 Yes No

Do you have normal sex drive/desire?

 Yes No

Do you have normal sensation in your penis?

 Yes No

How would you describe your erections (check appropriate):

- Firm erection on demand       Somewhat firm erection on demand  
 Firm erections only at night while asleep       Lose erection too quickly  
 No erections at all

Are you able to have intercourse?      Usually      Half the time      Rarely      Never

Have you tried any treatments for erection problems?      Yes      No

Provide details: \_\_\_\_\_

Do you have curvature of the penis when it is erect (circle)?      Yes      No

If yes:      when and how did this begin

- |                                   |         |              |             |       |
|-----------------------------------|---------|--------------|-------------|-------|
| Is the curvature                  | Upwards | Downwards    | Left        | Right |
| Has it been getting worse?        | Yes     | No           |             |       |
| Is it painful for:                | You     | Your partner | Not painful |       |
| Are you able to have intercourse? | Yes     | No           |             |       |

Do you have normal orgasms?

 Yes No

Do you ejaculate normally?

 Yes

No (specify) \_\_\_\_\_

Have you ever experienced trauma to your groin/testicles (e.g. kicked, fallen on bike etc)? please provide details

### NOTICE REGARDING CHARGE FOR MISSED APPOINTMENTS

If you are unable to keep your scheduled appointment, please notify our office at least 24 hours in advance. **Failure to notify the office at least 24 hours prior to the time of your appointment will result in a \$25.00 charge**, which will be added to your account.

As a courtesy, you will receive a telephone call from our appointment reminder system at the phone number that you provide as your "home telephone" number. We cannot guarantee that this reminder will be completed at least 24 hours prior to your appointment, therefore we recommend that you keep a record of your appointment time and, should you need to cancel or reschedule, contact us as soon as possible.

Your compliance with this policy will allow us to coordinate our schedule more efficiently and will allow us to schedule patients who may need to be seen urgently.

Thank you for your cooperation

**CONSENT FOR DIAGNOSTIC X-RAY PROCEDURE**

I hereby authorize Dr. Kubrich and/or assistants as may be selected by said physician to treat the following condition(s). Diagnosis \_\_\_\_\_

The procedures planned for the diagnosis of my condition(s) have been explained to me by my physician and are listed below

X-RAY OF KIDNEY BY INJECTION OF DYE THROUGH A CYSTOSCOPE PLACED INTO THE BLADDER

(CYSTOSCOPY AND RETROGRADE PYELOGRAM(S))

CYSTOURETHROGRAM (BLADDER X-RAY)

NEPHROSTOGRAF

Possible risks associated with this procedure(s):

NEED FOR ADDITIONAL DIAGNOSTIC PROCEDURES

INFECTION OF KIDNEY OR KIDNEY PAIN

BLADDER INFECTION

BLOOD IN URINE (CLOTS) WITH KIDNEY PAIN (RARELY SIGNIFICANT)

ALTERNATIVE THERAPY: OTHER FORMS OF X-RAY OR SCAN OR ULTRASOUND

I CERTIFY THAT THIS FORM HAS BEEN EXPLAINED TO ME AND THAT I HAVE READ IT, OR HAVE HAD IT READ TO ME AND THAT I UNDERSTAND ITS CONTENTS.

IS THERE A CHANCE YOUR PREGNANT? YES NO LAST MENSTRUAL CYCLE \_\_\_\_\_

Patient or Guardian Signature J. P. H. Date 3/21/12 Time \_\_\_\_\_

Name (print) \_\_\_\_\_ Witness Dee Andrusky

State law guarantees that you have both the *right* and *obligation* to make decisions concerning your health care. Your physician can provide you with the necessary information and advice but as a member of the health care team, you must enter into the decision making process. This form has been designed to acknowledge your acceptance of treatment recommended by your physician.

The information that follows is the text from a standardized Surgical Consent form. It is used for the most minor of procedures and the most complicated and serious ones. It is not meant to frighten you but rather to inform you that ALL procedures carry some risks. Many operations, for instance, have only the remotest chance of needing blood transfusions, but yet blood transfusions are mentioned. This form hopefully will allow you to better understand your upcoming operation. If you don't understand something - ASK.

I recognize that, during the course of the operation, post-operative care, medical treatment, anesthesia or other procedures, unforeseen conditions may necessitate additional or different procedures than those set forth. I therefore authorize my above physician, and their assistants or designees, to perform such surgical or other procedures as are in the exercise of their professional judgement necessary and desirable. The authority granted under this paragraph shall extend to the treatment of all conditions that require treatment and are not known to my physician at the time the medical or surgical procedure is commenced.

I have been informed that there are significant risks such as severe loss of blood, infection and cardiac arrest that can lead to death or permanent or partial disability, which may be attendant to the performance of any procedure.

I realize that the list of risks and complications on this form may not include all possible or known risks of the intended surgery but is a list of the more common or severe ones. I realize that new risks may exist or may be found in the future that are not mentioned on this consent form.

I acknowledge that no warranty or guarantee has been made to me as to the results of my procedure(s).

I understand that any aspect of this consent form that I do not understand can be explained to me in further detail by asking my physician(s) or their associates.

I certify that my physician has informed me of the nature and character of the proposed treatment, of the anticipated results of the proposed treatment, of the possible alternative forms of treatment; and the recognized serious possible risks, complications, and the anticipated benefits involved in the proposed treatment and the alternative forms of treatment, including non-treatment.

Patient or Guardian Initials \_\_\_\_\_

The medical procedure or surgery stated on this form, including the possible risks, complications, alternative treatments (including non-treatment) and anticipated results, was explained by me to the patient or his/her representative before the patient or his/her representatives consented.

## CONSENT FOR TREATMENT AND ACKNOWLEDGMENT OF RECEIPT OF INFORMATION

*Michael  
Harvey  
6-2012*

Louisiana Revised Statute 40:1299.40A requires that your physician obtain your informed consent to all medical and surgical treatment. What you are being asked to sign is a confirmation that your physician has discussed the nature and purpose of and the alternatives to the proposed treatment and the risks associated with that treatment, and that your physician has answered all of your questions in a satisfactory manner. Please read the form carefully. Ask your physician about anything you do not understand. He or she will be pleased to explain.

### NATURE AND PURPOSE OF THE TREATMENT

The following treatment has been offered to me (procedure) Cystoscopy/Vasculitis.

for the following condition(diagnosis) Vesicoureteral Reflux

I understand that in general terms, the nature and purpose of the treatment is to look into the bladder/vagina with a telescope.

### ALTERNATIVES TO THE TREATMENT

The following alternatives to the offered treatment, including Do nothing

have been explained to me as have the advantages and disadvantages of each. I understand that the consequences of not treating this condition include, but are not necessarily limited to persistent urinary symptoms, urinary retention, undiagnosed vaginal lesion affecting bladder function.

### RISKS ASSOCIATED WITH THE TREATMENT

I understand that medicine is not an exact science and that complications do occur. I confirm that I have been given no guarantee or assurance by the physician whose name appears below, or by anyone else, as to the results that may be obtained from treatment.

The following risks known to be associated with this treatment and with any associated anesthetic have been explained to me:

common	uncommon	very uncommon	
	X		failure of the treatment to accomplish its intended purpose
	X		pain, numbness, swelling, and discoloration at the treatment site
X			bleeding (hemorrhage), formation of blood clots (hematoma formation)
	X		infection
	X		atelectasis (collapse of tiny air sacs in lungs) which may require respiratory therapy
	X		nausea and vomiting
	X		urinary retention which may require the use of catheter to drain the urinary bladder
	X		disfiguring (very noticeable scars)
	X		wound dehiscence (separation of the surgical incision)
	X		injury to nerves caused by pressure from bleeding or from retraction of tissues or by the incision
	X		blood clots in the legs
	X		pulmonary embolus (a blood clot or other substance which becomes lodged in the lung)
	X		renal (kidney) failure
	X		hepatic (liver) failure
	X		shock (extremely low blood pressure)
	X		chemical, thermal, or electrical burns or injury to the skin
	X		injury to the nerves going to the arms or legs, causing loss of use, weakness, numbness, and pain in the arms, fingers, hands legs and feet
	X		adynamic ileus (inactivity of the bowel) and abdominal distention (swelling) which may require the use of a nasogastric tube (a tube inserted through the nose into the stomach), bowel obstruction
	X		injury to the adjacent organs, including the bowel, the ureters (tubes which carry urine from the kidneys to the urinary bladder), and the urinary bladder which may involve loss or loss of function of the injured organ

common   uncommon   very uncommon

\_\_\_\_\_   \_\_\_\_\_   X  
 \_\_\_\_\_   \_\_\_\_\_   X  
 \_\_\_\_\_   X   \_\_\_\_\_  
 \_\_\_\_\_   \_\_\_\_\_   X

formation of a fistula (an abnormal passageway from one part of the body to the other) from the bowel to the vagina or from the urinary bladder to the vagina  
 painful inflammation or destruction of pubic bone (osteitis pubis)  
 risk of damage to the urethra  
 musculoskeletal injuries or exacerbation (worsening of arthritic conditions of the back or neck which might occur while anesthetized)

In addition to these risks and complications of treatment, some very uncommon complications of anesthesia include: death, brain damage, quadriplegia (paralysis of both arms and both legs), paraplegia (paralysis of both legs), loss of or loss of function of arms or legs, cardiac arrest (heart attack), stroke, pneumonia, and adult respiratory distress syndrome.

I understand that if this procedure is performed on a patient who happens to be pregnant there may be additional complications, to include the loss of the pregnancy; and that pregnancy tests are not always reliable in the early stages of pregnancy.

I have been told that if one or more of these complications occurs I may require an extended hospitalization, blood transfusion with associated risks of hepatitis and AIDS, and additional surgery, to include the creation of an opening in the abdominal wall for the passage of urine or feces (nephrostomy, ureterostomy, ileostomy or colostomy).

#### ACKNOWLEDGMENT

I acknowledge that I have read and understand this consent form (or that it has been read to me), that I understand the information contained in it, including all of the medical terminology, about, which I have asked, if unsure: that I have been given an adequate opportunity to ask whatever questions I had about the treatment; that all of my questions about the treatment have been answered by my physician in a satisfactory manner; and that I understand the nature and purpose of the treatment, its risks, and the alternatives.

#### CONSENT FOR TREATMENT

I, hereby, authorize Dr. Kubricht and /or associate or assistants of his or her choice to perform the above procedure on myself. I further authorize and direct him or her to perform any other procedure with the exception of (none) which in his or her judgment is advisable for my well-being, and to provide such additional services as he or she may deem appropriate including, but not limited to, the administration of any anesthetic agent.

This consent form is valid until it is expressly revoked and the revocation is communicated to my physician. I understand and agree that it is my responsibility to communicate any revocation of this consent to my physician.
